

COST SUMMARY & QUOTATION

Village60 *Retirement Operations Platform*

This document summarises the cost of designing, building, and hosting Village60 — a complete management system for running a retirement home, from resident care and clinical records through to billing, inventory, and day-to-day administration.

PREPARED BY

TRAGAKI

DATE

June 2026

ENGAGEMENT TOTAL

LKR 1,100,000

The quoted price includes **one month of in-house training** to get your team up and running, plus **twelve months of support and bug fixes** — everything needed to go live, learn the system, and fix anything that does not work as agreed.

All-inclusive

01 — THE APPLICATION

One platform for the whole operation

Village60 is a single, secure web platform built specifically for retirement home operations — *replacing the spreadsheets, paper files, and separate tools that most homes end up juggling.*

Resident records, clinical care, medication rounds, inventory and purchasing, monthly billing, payment tracking, salary management, occupancy reports, and enquiries from prospective families all live in one place. Administrators can see across the whole organisation; care staff only see the homes they work in.

The system works on desktop, tablet, and mobile, and is available in **English, Sinhala, and Tamil**. Each staff member can choose whichever language they are most comfortable with.

BUILT-IN ACROSS THE PLATFORM

Security is built in from the start: staff sign in with encrypted sessions and strong passwords, and the system locks accounts after repeated failed attempts. Admin and Care roles control who can see what, scoped down to individual homes. Sign-in events, medication records, inventory movements, and billing entries are all logged with a clear audit trail.

Billing supports multiple currencies per home, with accurate accounting down to the smallest unit. Monthly resident charges are generated automatically on the first of each month. Families can access privacy-safe resident profile pages via QR codes, and the database is backed up daily with a documented restore process. Every list and directory in the application has search, filtering, and pagination built in, so staff can find what they need quickly.

02 — SCOPE OF DELIVERY

Implemented features & services

i. Platform Foundation

The foundation covers everything needed to run the system in production: secure sign-in, a simple two-tier role model, and an interface available in English, Sinhala, and Tamil. The application works well on any screen size, and we handle deployment, daily backups, and the operational runbook from day one.

Authentication

Roles & permissions

3 languages

Backups

ii. Homes, Wards & Residents

You can manage multiple homes from one account, each with its own wards, bed capacity, and monthly rates. Resident records cover the full lifecycle — intake (with duplicate checking), photos, next of kin, power of attorney, nurse assignment, and departures. Each resident can also have a shareable public profile with a QR code for families.

Multi-site

Bed capacity

Resident records

QR profiles

iii. Clinical Care & Medication

Care staff can manage scheduled and as-needed (PRN) medications for each resident, along with conditions and allergies. The daily Medication Administration Record (MAR) shows what was given, when, and by whom — and stock levels update automatically as doses are recorded.

Daily MAR

PRN support

Allergies & conditions

Auto stock deduction

iv. Inventory & Procurement

Each home keeps its own item catalog with live stock levels and a full history of every movement. There is a supplier directory and a complete purchase order workflow — from draft through approval, sending, receiving, and closure. When medication stock runs low, the system suggests reorders.

02 — SCOPE OF DELIVERY (CONTINUED)

v. Billing & Finance

Monthly resident charges are generated automatically, and invoices can be raised for both resident and home operating accounts. Payments are recorded against multiple methods, with oldest charges settled first. Registration fees, deposits, medication costs, and procurement all feed into a single ledger so nothing falls through the cracks.

Auto monthly billing

Invoices

Payments

Unified ledger

vi. Analytics & Growth

Dashboards cover occupancy and census trends, monthly cash flow, expense breakdowns, admissions, stay duration, demographics, and staff workload. A public enquiry form feeds a waiting-list pipeline, with metrics on conversion rates and available capacity.

Demographics

Waiting list CRM

vii. Administration & Daily Operations

Administrators can manage staff with per-home assignments and floaters, configure organisation settings, and track tasks with priorities and due dates. Salary profiles, compensation schedules with allowances and deductions, and payroll payment recording give finance teams a clear view of staff costs alongside resident billing. The main dashboard highlights overdue payments, tasks that need attention, and upcoming resident birthdays — the things that matter most on a busy morning.

03 — IMPLEMENTATION BREAKDOWN

Cost by feature area

The implementation fee covers design, development, testing, and delivery of all seven scope areas on the previous page. Amounts below reflect the relative complexity and breadth of each area — including data model, screens, APIs, and automated tests — and sum to the implementation total quoted on the following page.

FEATURE AREA	SHARE	AMOUNT
i. Platform Foundation Authentication, roles and permissions, trilingual interface, responsive layout, deployment pipeline, daily backups, and operations runbook.	16%	LKR 170,000
ii. Homes, Wards & Residents Multi-site homes and wards, resident lifecycle, intake and duplicate checking, portraits, next of kin, power of attorney, departures, and QR public profiles.	12%	LKR 125,000
iii. Clinical Care & Medication Scheduled and PRN medications, conditions and allergies, daily MAR with administration audit trail, and automatic stock deduction on dose recording.	15%	LKR 155,000
iv. Inventory & Procurement Home item catalog, stock ledger and adjustments, supplier directory, purchase order workflow, receiving, and medication reorder suggestions.	16%	LKR 170,000
v. Billing & Finance Automated monthly charges, multi-currency support, resident and home invoices, payment recording with FIFO allocation, registration fees, deposits, and unified ledger.	17%	LKR 180,000
vi. Analytics & Growth Occupancy and census dashboards, cash flow and expense analytics, admissions and demographics, staff workload, and waiting-list pipeline with conversion metrics.	8%	LKR 85,000
vii. Administration & Daily Operations Staff management with per-home assignments, organisation settings, task tracking with priorities, salary profiles and payroll recording, and the operational dashboard with alerts and reminders.	16%	LKR 160,000
IMPLEMENTATION SUBTOTAL	100%	LKR 1,045,000

Cross-cutting work — security hardening, audit logging, shared list and search patterns, internationalisation, and the automated test suite — is included within the feature areas above rather than listed separately.

04 — COST SUMMARY

Investment

ITEM

AMOUNT

Implementation & Delivery

LKR 1,045,000

Design, development, and delivery of the full Village60 platform — all seven feature areas itemised on the previous page (Platform Foundation through Administration & Daily Operations), including the data model, security, trilingual interface, automated tests, and everything needed to go live.

Hosting & Infrastructure — 12 Months

LKR 55,000

Production hosting with HTTPS, deployment, monitoring, and daily automated backups — including a documented restore procedure — for the first twelve months of operation.

In-House Training — 1 Month

INCLUDED

Hands-on training at your premises during the first month after handover, covering day-to-day use of the platform for administrators and care staff — at no additional cost.

Support & Bug Fixes — 12 Months

INCLUDED

If something in the delivered system does not work as agreed, we will investigate and fix it at no extra charge for twelve months from handover.

TOTAL ENGAGEMENT

LKR 1,100,000

One million one hundred thousand Sri Lankan rupees — all-inclusive.

INCLUDED • 1 MONTH

In-House Training

During the first month after handover, we come on site and walk your team through the system — administrators and care staff alike — so everyone knows how to use Village60 confidently from day one.

INCLUDED • 12 MONTHS

Support & Bug Fixes

For the first year after handover, any defect in the delivered functionality is investigated and resolved at no additional cost. You are not left on your own while the team is still finding its feet with a new system.
